At the age of 21 while going through severe constant panic attack I started medication with tricyclic antidepressant clomipramine. Sertraline should be used with cautiously and with close physician supervision by people with a prior history of seizures , people who are at an increased risk of bleeding, and those for whom weight loss is undesirable. Thank you and looking forward to your kind reply. Because the result was not satisfactory I had to switch to many different antidepressants. If a combination of antidepressants is considered beneficial, a low dose of tricyclic antidepressants 1025 mg daily should be used. For a young person who hasn't consumed alcohol before and is on setraline, what would happen if they were to drink? And 5 these days I often notice her making throat clearing sound which I beleive she can't resist,very similar to the one I remember OCD began in me. Someone give me a few answers. I have a five year old girl. If there is no therapeutic response, the dosage may be increased to the maximum of mg daily at intervals of at least one week. Sertraline should not be taken with grapefruit juice as the combination may increase sertraline levels in the body. But I'm afraid she likes to 1 frown and shout at when she is asked to do something could it be because her mother is a short-tempered one? Interactions Sertraline interacts with St. A group of serious side effects, called serotonin syndrome, have resulted from the combination of antidepressants such as sertraline and members of another class of antidepressants known as monoamine oxidase MAO inhibitors.Detailed dosage guidelines and administration information for Zoloft (sertraline hydrochloride).
